Customer and Case Risk Rating Methodology

Document ID: DCB-MTH-CRR | Version: 1.2 | Status: Current

Effective date: 2026-02-01

Classification: Internal | Owner: Compliance Analytics

1. Purpose

This methodology defines how DCB computes an explainable case risk score from 0 to 100 used to prioritise investigations and to determine when human approval is mandatory.

2. Scoring Factors

The case risk score is the sum of the following factor points, capped at 100: KYC risk category - Low 0, Medium 10, High 25; PEP or PEP associate - 15; confirmed sanctions or watchlist match - 40; unresolved potential watchlist match - 20; exposure to a High-Risk Jurisdiction in the review period - 15; velocity anomaly, where 30-day turnover exceeds 3 times the 90-day baseline - 15; typology match (structuring, mule, layering, round-tripping) - 20 per distinct typology, maximum 40; adverse media hit - 10; documented legitimate explanation verified - minus 20.

3. Risk Bands

Scores of 0 to 39 are Low, 40 to 69 are Medium and 70 to 100 are High. High band cases require Principal Officer approval before any escalation, reporting or account restriction.

4. Explainability Requirement

Every score must be presented with its factor breakdown and the evidence supporting each factor. A score presented without factor breakdown is not acceptable for decision-making.
